

ForeScout Deepens Visibility into Operational Technology Networks with New Industrial System Integrations

June 13, 2018

Partnerships with Indegy and SecurityMatters deliver on ForeScout's strategy to secure the extended enterprise, including operational technology (OT) networks

SAN JOSE, Calif., June 13, 2018 (GLOBE NEWSWIRE) -- [ForeScout Technologies, Inc.](#) (NASDAQ:FSCT), a leading internet of things (IoT) security company, today announced partnerships with [Indegy](#) and [SecurityMatters](#) to integrate these technologies into its visibility platform and secure [operational technology](#) (OT) and industrial environments. With this new category of industrial control system (ICS) partnerships, ForeScout continues to deliver on its strategy to provide visibility across the extended enterprise – from campus, data center, cloud to OT networks.

"The essential systems that are foundational to a nation's economy, security and health are being connected to IT systems and becoming increasingly vulnerable to cyber threats," said Pedro Abreu, chief strategy officer, ForeScout. "Cyberattacks on critical infrastructure introduce dangerous risks that go beyond financial loss or business disruption, and can threaten physical safety. ForeScout is partnering with industry leading ICS security vendors that share our commitment for transforming security through visibility to protect the most critical systems."

ForeScout Adds New Integrations for Industrial Control Systems

As operational and industrial control systems connect to IT environments, it's critical for organizations to build and maintain an asset inventory of every device in every ICS layer and ensure compliance with industry regulations and security standards. However, ICS devices create unique challenges for organizations because most cannot support traditional security methods, and are sensitive to legacy scanning and monitoring techniques. Also, given the importance of critical infrastructure, many of these devices cannot be taken offline for maintenance and patching.

ForeScout's agentless visibility and control solution provides comprehensive inventory and device compliance capabilities for network-connected devices. By partnering with Indegy and SecurityMatters, ForeScout now offers deeper visibility into every layer of ICS environments, including SCADA systems, programmable logic controllers (PLC) and sensors. With partners sharing device data, ForeScout consolidates governance to deliver visibility and control of all ICS and IT assets while enabling device compliance, incident detection and response, and effective risk mitigation across the entire environment.

According to a May 2018 Gartner, Inc. [report](#) by Saniye Burcu Alaybeyi, 2018 Strategic Roadmap for Integrated IT and OT Security, "OT networks have been unmanaged, from a security and risk perspective, for many years. They are flat, with a mix of OT protocols, unidentified assets, legacy systems and devices with unsecure communications... Successful security governance in an integrated IT/OT environment must be able to balance enterprisewide objectives with the combined risk appetite and the capability to secure and protect the two domains."

Leveraging insights from our partnerships with Indegy and SecurityMatters, ForeScout delivers the following integrated security capabilities across IT, OT and critical infrastructure environments:

- End-to-end agentless visibility and security
- Automated asset discovery and management
- Real-time threat detection and contextual alerts
- Continuous validation of asset configurations and compliance
- Deeper incident response and threat mitigation

ForeScout integrations for Indegy and SecurityMatters are generally available now.

About ForeScout:

ForeScout Technologies, Inc. helps make the invisible visible. Our company provides Global 2000 enterprises and government agencies with agentless visibility and control of traditional and IoT devices the instant they connect to the network. Our technology integrates with disparate security tools to help organizations accelerate incident response, break down silos, automate workflows and optimize existing investments.
